

RSM Winter School – Basics

**Basics:
Research Design**

Camilla Perrone
(Università degli Studi di Firenze Italy)
camilla.perrone@unifi.it

This workshop explores the nexus between the initial phases of a research design process inspired by a research idea and the following phases addressed to providing valid arguments and explaining why your research topic is worthy of study and may make a significant contribution to the body of already existing research, in turn why the research is being done. Moreover, this workshop digs into practical questions about (1) how to make sure all parts are properly in place before “tightening”, and why are you thinking of doing a specific study of the topic chosen; (2) how and when to properly address and unfold the research work with regard to the entire research cycle: project proposals, data, methods, workflows, project reports and research articles etc.
